

Integrand Appoints Sysontek as Korean Distributor for EMX®

Sales and Technology support for EMX and Continuum in South Korea

Berkeley Heights, NJ. – February 15, 2013 –Integrand Software today announced that it has appointed Sysontek, Inc. as the exclusive distributor to sell and support its flagship electromagnetic simulator EMX® in South Korea.

“We have been very happy to appoint Sysontek as our distributor and to enable Korean customers to design best in class RF IC products with the EMX software,” said Dr. Sharad Kapur, president of Integrand Software Inc. “Sysontek is an ideal partner since their technology team has had many years of IC design experience of using EMX at a number of the world’s leading semiconductor companies”.

“EMX is the best EM simulator for modeling on-chip passive devices, and we are very delighted to provide the solution to our customers in South Korea,” said Dr. Dong Hun Shin, President of Sysontek, Inc.

About Integrand Software, Inc.

Integrand Software, Inc. provides electronic design software and services used to design high frequency, RF and Mixed Signal complex integrated circuits (ICs) for the global semiconductor and electronics industries. Our advanced EM simulation tool, EMX®, allows designers to accurately and efficiently simulate large RF circuit blocks, characterize the behavior of passive components and analyze the parasitics due to interconnect. EMX shortens design cycles and bring to market substantially better

products with less risk. For more information about Integrand, visit
